Login Activity Report

In total, the system has recorded login data from a wide range of users, with 4 unique individuals participating across 4 sessions.

This data offers valuable insights into user behavior, including session lengths, peak login times, and the distribution of roles within the system.

The role distribution gives an understanding of how the user base is segmented, while the analysis of login behavior helps identify patterns that can inform system optimizations.

The system tracks login activities for 4 unique users across 4 sessions.

The busiest login hour is 22:00.

- Role distribution:

  product owner: 10 (76.9%)

  admin: 3 (23.1%)

Detailed Insights:

- Maximum session duration: 9.35 minutes by aakash (Role: admin)

- Minimum session duration: 1.62 minutes by new (Role: product owner)

- Total failed login attempts: 3 (42.86% of all actions)

- User with most failed logins: new (User ID: 19) with 2 failures
